Incident Postmortem: Route Optimizer Outage

INC-2025-118 · Severity 1 · Date of incident: 11 November 2025 · Author: Platform team · Status: Closed

Summary

The route optimizer was unavailable for 2 hours and 47 minutes, from 09:12 to 11:59 IST. Drivers fell back to default routes and 1,340 shipments were delivered late.

Root cause

The TLS certificate on the internal maps proxy expired at 09:10 IST. The route optimizer rejected the proxy's certificate and every routing request failed. The certificate had been issued manually in 2024 and was not tracked by our certificate automation.

Timeline (IST)

Time	Event
09:12	Routing error rate reaches 100%. Pager alert fires.
09:40	On-call engineer identifies TLS handshake failures.
11:20	New certificate issued and deployed to the maps proxy.
11:59	Error rate back to normal. Incident resolved.

Action items

Action	Owner	Due
Move all internal certificates to automated renewal	Platform team	15 Dec 2025
Alert 30 days before any certificate expires	SRE	30 Nov 2025
Add a cached fallback route mode to the optimizer	Routing team	31 Jan 2026

Lessons

Manually issued certificates are invisible to automation. Every certificate must be registered in the certificate inventory.
